How to find a grid reference for your site.

There are many different ways to find a grid reference for your site online.

The following website: [www.streetmap.co.uk](http://www.streetmap.co.uk) is fairly easy to use and allows you to find grid references for different points on a map.

**Step 1.** Enter the post code/road name of the site in the search box at [www.streetmap.co.uk](http://www.streetmap.co.uk)

**Step 2:** A map of your site will open up. You can zoom in and out of using the controls on the right hand side.

You will need to move the crossing location to the centre of the map to calculating the grid reference. If your map isn’t centred on the crossing, click on the move arrow button (it turns orange when selected) and then click the correct location on the map.

**Step 3:** Once you have the map arrow centred on your patrol area click on link to convert to map coordinates shown at the bottom of the mapping window, circled in red (you click on the word here).

This opens a new window which contains the grid reference for that point (next to the letters LR). Note down the whole grid reference.

**Step 4:** Repeat step 2 and 3 for each grid reference point that you need:
- The start of the migration crossing area,
- The end of the area
- And the middle of the site.
