“Leapfrog helped us to create a “Secret Garden” in our school grounds. This area was specifically highlighted in our Ofsted report as being a useful tool for the school and was fundamental in helping the school attain green flag eco-schools status” Julie Branch, former Head at Farcet School

Froglife is a wildlife conservation charity that has been working to save the UK’s native reptiles and amphibians since 1989. Our work across England and Scotland includes habitat creation and a variety of education projects. These projects work with schools, youth groups and offenders and often target the most disadvantaged young people. This experience has enabled Froglife to develop a wide variety of activities and resources suitable for a range of age-groups.

The Leapfrog Project enables schools to improve their environmental education through habitat creation, educational sessions and fun events. Schools can select activities that best suit their interests, budget and facilities. All sessions are delivered by specialist, DBS-checked staff and can be linked to the Curriculum through Science, Art and Design, English and Maths. They can also be linked to Citizenship and PHSE.

“The results have been amazing! We now have a wonderful pond (complete with frogs!) in which the children can do pond dipping, as well as a wormery, bird boxes, bat house, insect homes and much, much more” Head Teacher – Coates Primary School, Cambs

The Leapfrog project provides schools with the flexibility to pick the options that best suit them. Below are some of the activities that Froglife offer but we understand that not all schools are the same and for our projects to have the maximum impact it is essential they are tailored to meet your needs. We are happy to discuss how activities can be adapted to better suit you or new ideas that you would like to explore we are always keen to develop and improve the opportunities on offer.

- Froglife can help build or restore wildlife ponds and other habitats to provide a great resource for your school. We can also support you with a grant application to cover the costs.
- We offer a range of indoor and outdoor educational sessions to suit your needs (see above). Swimming with dragons is an interactive educational swimming session.
- We have two interactive exhibits that can be displayed at your school events to educate pupils about reptiles and amphibians. Exhibits are suitable for those with special needs.
- Froglife can provide all necessary equipment, hand-outs, activity sheets, risk assessments, lesson plans and relevant advice. If your school doesn’t have a green space or pond, we can arrange a visit to a suitable venue.
