

Common Frog

(Rana temporaria)

- Frogs are amphibians
- They start life as frogspawn in the water
- Tadpoles then hatch out of the frogspawn and swim around
- They then grow legs and hop out of the pond as tiny froglets!

Froglife is a UK wildlife charity committed to the conservation of amphibians and reptiles - working with people, enhancing lives together for a healthier planet. Find out more about our education projects and activities at www.froglife.org
