

Common Toad

(Bufo bufo)

- Toads are amphibians
- They start life like frogs do, as eggs in the water
- Tadpoles then hatch out of the eggs and swim around during the spring and summer
- They then grow legs and hop out of the pond as tiny toadlets
- Common toads are found across Europe, and are threatened by roads cutting up their habitat. Thousands of them are rescued by volunteers every year!

Froglife is a UK wildlife charity committed to the conservation of amphibians and reptiles - working with people, enhancing lives together for a healthier planet. Find out more about our education projects and activities at www.froglife.org
